

Managing Bias in the Care of Pregnant and Parenting People with Substance Use Disorder

This one-hour, CME/CEU-approved training was co-developed with Dr. Mishka Terplan, a national expert on substance use in pregnancy, who is board certified in both obstetrics and gynecology and addiction medicine. The training presents evidence of bias in the care of childbearing people with substance use disorder and strategies for bias mitigation. It features the testimonials of people in Maryland who experienced addiction and pregnancy.

The training has three modules:

- Addiction and Pregnancy
- Bias and Discrimination
- Supportive Care

By the end of the training, you will be able to:

- Recognize addiction, or substance use disorder (SUD), as a chronic, treatable condition.
- Describe how stigma and bias create barriers to quality care and equitable outcomes, particularly in pregnancy.
- Recognize how the postpartum period increases vulnerability to morbidity and mortality for people with SUD.
- Identify clinical practices that can be implemented in hospital settings to help reduce bias in the case of people with SUD.
